

Choosing styles

Choosing menu style

Now you need to decide how the menu on your DVD disc will look like. Karaoke DVD Burner comes with several predefined menu styles, you may also create styles of your own.

The look of the disc is determined by current style. To change the style simply select it from **Style** list -- the preview window will be updated immediately. You may change the number of rows and columns that can appear on a single screen (this matters if your DVD contains a large number of songs). If you would like to define your own style use **Style Editor**.

It is important to define the television standard you will be using -- it should be NTSC for USA, Canada, Japan, and PAL for Europe and most of Asia. If you are not sure what television standard should you use please consult your DVD player manual.

Show track numbers checkbox enables display of title numbers for each of the songs on the menu screens.
