

# Text settings event

## ***Font***

This setting specifies which font will be used for the lyrics and how large the letters should be. If you are trading your PK2 files make sure that you use fonts that are installed on the destination computer.

## ***Vertical alignment***

Allows to change the placement of the lines of the text. You may select Center, Top, or Bottom which would place the text at the appropriate part of the screen, or choose Space evenly, which makes sure that the first line is at the top, the last at the bottom, and all the spaces between the lines are equal.

## ***Horizontal alignment***

This setting controls the way the individual lines of text are placed. You have the choice of Center, Left, and Right.

## ***Lines per screen***

Allows to specify the maximum number of lines to be shown. Note that if the font size is too large, the actual number of lines may be lower.

## ***Additional spacing***

The number of pixels to insert between the lines.
