

# Adding tracks from a CD+G disc

To add songs from a CD+G disc, click the **Read CD+G disc** button in the main window, click the **Read CD+G disc** button on the toolbar () , or select the **Add Tracks from CD+G disc** command from the **Folder** menu.

Add CD+G Disc Track dialog box will appear.

If you have a CD+G disc inserted in your drive, you will see the list of tracks. Karaoke DVD Burner uses the FreeDB online database to display track names. If no internet connection is available, only track numbers will be displayed. You may change FreeDB settings in [Settings dialog box](#).

If you have more than one CD/DVD drive, select the appropriate one from the **Device** list.

Mark the songs you would like to add to the DVD disc and select the way folders will be created. The following modes are available:

- songs will be added to the current folder
- a new folder will be created and songs will be added there (this is best if you would like to organize your DVD by CD+G disc names)
- a new folder will be created for every artist (this works only for discs for which track list has been downloaded)
- a folder with the first letter of the artist name will be created (this is best for creating alphabetically ordered DVD); this mode also works only when track list is available

3. Click **OK** when ready. Karaoke DVD Burner will save the files to the hard disk. Please note that this process may take some time, as video encoding is a complex task.

*Note: CD+G tracks are kept in temporary files. If you save your DVD compilation, they will not be deleted from the hard disk. If you do not save the compilation, Karaoke DVD Burner will delete these files when closing.*
