

Creating a DVD disc

To create a DVD disc, click the **Create and Burn** button ().

Karaoke DVD Burner will first convert CDG files to DVD video format. This process may take a while, especially if the compilation contains many files. Once the files are converted, the **Burn DVD Disc** dialog box will appear.

Current burner allows you to select the DVD writer you would like to use. Make sure to insert a blank DVD disc -- if you have not done so before displaying this dialog box, you may need to click **Refresh**.

When **Create compatible disc** is selected, Karaoke DVD Burner writes at least 1 GB of data to the disc. This ensures that the disc will be read by all DVD players. You may turn this off if you are burning the disc for testing purposes.
