

Clip

kst2-mainfrn-clip-75

Clip allows to remove starting and ending part of the CD+G song. You may use files in **MP3+G**, **ZIP**, or **BIN** format.

There are three modes for processing beginning of the song:

Skip silence at the beginning of the song	This is the default mode. The program automatically detect the moment when music starts and tries to remove dead air at the beginning.
Cut at the first possible moment	Here you may define proprietary amount of time that will be removed from the beginning of the song. Usually it is not possible to make a cut at the exact point, but the program will do its best.
Add silence at the beginning	This option add silence before the song starts. It may be used if the music starts too soon.

End of the song also has three modes:

Skip silence at the end of the song	This is the default mode. The program automatically detect the moment when music ends and cuts the graphic part there.
Cut before the end of the lyrics	Program shortens the song at the end
Add silence at the end	Makes the song longer by adding silence at the end

Depending on destination folder mode selected Karaoke Sound Tools will create songs in the new folder or will append '-clipped' to the song name and write new files in the same folder as the original song.
