

Advanced Features

- Overlays
- Singer screen clones

Overlays

Overlays are images that are displayed over the singer screen. You may create as many overlays as you want, and you may place them anywhere on the screen.

https://www.youtube.com/embed/CPtVH_kX7JU

To access overlays, choose the **Edit Overlays** button in the **Display** or **KJ** settings.

To add an overlay:

1. Click the [+] button or drag and drop an image onto the **Edit Overlays** window.
You may use JPG, BMP, or PNG images. PNG images may have alpha transparency.
2. Choose the opacity of the image. The lower this value is, the more translucent the image will be.
3. Choose whether you want to keep the aspect ratio of the image. The image will be centered inside its field.
4. Click OK.
5. Position the image.

Use the same procedure to add additional images. When finished, click OK.

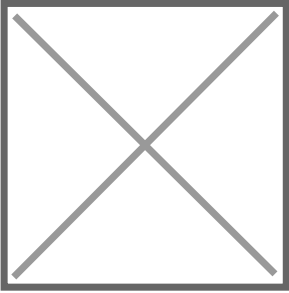

Overlays are applied after you **Apply** registry changes or exit **Settings** with **OK**.

Overlay settings are stored in the registry in the Siglos Karaoke Professional key. Exporting and importing settings works for them as long as the image path on disk is not changed.

Singer screen clones

If your system supports multiple displays, you may create a singer screen clone to display in every one of them. You may use cheap USB-C->HDMI dongles to easily connect your laptop computer to several screens and display lyrics on every one of them directly from Siglos.

Screen clones are available from **Screen clone** button () in **Rotation** window.

When you click 'Screen clone' button on **Rotation** window, you will see **Add new window clone** command. It will create a new window that clones the content of the singer screen.

You may drag it around with mouse, when you double-click it, it will be maximized on the current monitor.

When you move a mouse cursor to the clone window, **[x]** and **[i]** buttons will be displayed in top right corner. **[i]** button allows to turn scrolling message on and off for that clone and to define its individual padding.

If clone windows become obscured, you may bring them to the front by clicking playback control window.

Important notice: Singer screen needs to be visible (on top of all other windows) for cloning to work.
