

Fill-in playlist

Fill in list is automatically activated when no song from the main playlist is being played. When switching to and from the fill in playlist, the music is faded in and out.

Fill in list is saved between sessions, and the first song from the list is played when starting a new session. You may change this behavior by unchecking **Initiate fill-in playback on program start** option in **KJ Settings**.

If you would like to have the music played when nobody is singing, use the fill-in playlist. To open it click **Fill-In Playlist** button on the playlist window.

To add songs to the fill in list select **Add file(s)** button and then select the files you would like to add. **Add directory** allows to add files from the multiple folders. You may also drag and drop files and folders to the fill-in list.

You may open and save the playlist using **Load** and **Save** buttons.

Import button allows you to load YouTube playlists or external playlists in M3U format.

Additional options are:

- **Randomize**: list will play in random order
- **Loop**: will play continuously
- **Audio only**: if playlist item is a video, it will be treated as audio (you may play YouTube Music playlist this way)
